The Master’s in Organizational Science prepares students to be successful managers and to design and implement strategies that impact organizational effectiveness and increase productivity within the workplace. With a curriculum rigorously grounded in industrial and organizational psychology, students will learn to implement and evaluate workplace practices based on scientific evidence. This 36-credit hour program can be completed in just four semesters.

- Tackle the challenges of a changing workplace
- Create more competitive workplaces and engaged employees
- Work in a growing and in-demand field with employment opportunities in a variety of areas including organizational development, human resources and talent management
- Shape organizational strategy
- Understand how data drives business decisions
