

EVR 3163: Sustainable Forests
Fall 2026
TR 11:00am-12:15pm

Forests play a critical role in the provision of ecosystem benefits. This course aims to enhance our understanding of the ecology and management of the world's forests, as well as their governance, their contributions to the global economy, and their influence on the culture and livelihoods of forest-based communities. In the process, students will be exposed to basic principles and methods of forestry, as well as the challenges facing forest managers. We will also provide field survey and in-class data management opportunities. The course is designed for students from diverse disciplines and technical backgrounds.

Instructors: Mike Ross (rossm@fiu.edu) and Cara Rockwell (crockwel@fiu.edu)
