

Some Invasive Species Control Success Stories and a Big Concern

Dennis Giardina is the Everglades Region Biologist for the Florida Fish and Wildlife Conservation Commission and the Co-Chair of Everglades Cisma. His career has focused on endangered species recovery and invasive species control in Florida and the Caribbean for 36 years. This lecture will profile a few of the successful invasive species control efforts undertaken by the partners of the Everglades Cooperative Invasive Species Management Area, (ECISMA). It will also profile the threat that a complex of species from the Eastern Hemisphere poses to the coastal, tropical forests of Florida and the Western Hemisphere.
