School of Environment, Arts and Society

The Arctic in Global Perspectives

Why are changes in the Arctic important for South Florida and the rest of the world?

The Arctic region is changing at an accelerated rate that has not been experienced by modern humankind. While the wilderness remains a prominent part, the Arctic and its peoples are experiencing tangible realities from climate change, melting ice, increased industrial activities, and development of the region's natural resources.

In the School of Environment, Arts and Society's inaugural *Our Common Future* lecture, Dr. Robert Corell, a global climate scientist, will discuss the consequences of interactions between regions of the Northern hemisphere and the Arctic on climate change, ecosystems, human health, and development, and the potential impact on Arctic countries, and the rest of the world, including South Florida.

For more information about Dr. Corell and SEAS' *Our Common Future* series, visit seas.fiu.edu.

Featuring

Robert W. Corell, Ph.D.

Senior Faculty Fellow, School of Environment, Arts and Society

Professor II and Arctic Chair, University of Tromsø, Norway

Principal, Global Environment and Technology Foundation

Thursday, Mar. 28, 2013

7:30 p.m.

Graham Center West Ballroom

FIU Modesto A. Maidique Campus

11200 S.W. 8th Street

Miami, Florida 33199

This event is free and open to the public.
